VIROX™ INTRODUCES A NEW HIGH LEVEL DISINFECTANT, PREVENTION™ HLD8 STRIKES A PERFECT BALANCE BETWEEN SAFETY AND EFFICACY, FOR THE ANIMAL HEALTH MARKET

July 12th, 2016

Oakville, ON - Virox™ Animal Health, the creators of the patented Accelerated Hydrogen Peroxide® (AHP®) technology announced the launch of a new high level disinfectant (HLD) – PREVENTION™ HLD8. High level disinfectants are used widely used in the Animal Health market for reprocessing semi-critical medical devices, however, many of these facilities encounter sensitivity issues with the most commonly used high level disinfectants. PREVENTION™ HLD8 will provide the animal health market with an environmentally friendly, safer and easier to use product that is non-sensitizing and has virtually no inhalation risks for staff, patients or clients.

“The Accelerated Hydrogen Peroxide® (AHP®) formulation used in PREVENTION™ HLD8 was co-developed with STERIS Corporation,” says Randy Pilon, President, and CEO, Virox Technologies, Inc. “Being able to develop a formulation that provides the perfect balance between safety and efficacy is truly a breakthrough achievement. “We’re excited to bring this formulation to the markets outside of traditional healthcare facilities,” said Pilon. “Finally, there is no longer a need to compromise by using harsh chemistries to reprocess the semi-critical devices health professionals use every day.”

PREVENTION™ HLD8 is a 2% AHP® formulation that provides high level disinfection in *only 8 minutes* and can be *re-used for up to 21 days*. In addition, no special venting or disposal measures are needed as the solution can be easily rinsed down the drain. PREVENTION™ HLD8 is also non-staining, virtually odorless and leaves no toxic residues on devices *after just one rinse*. According to Faraz Ahmadpour, Vice President, Open Innovation, “the oxidative action of our AHP® technology does not promote biofilm formation and has excellent materials compatibility with the semi-critical instruments and devices found in the Animal Health market.”

A chemical Indicator test strip (PREVENTION™ HLD8 Test Strip) and log charts are also available to verify and record the correct minimum effective hydrogen peroxide concentration each time reprocessing is performed.

PREVENTION™ HLD8 is sold exclusively in the United States. Please visit www.viroxanimalhealth.com to find a distributor and for more information on how PREVENTION™ HLD8 can improve productivity, resolve OSHA compliance and provide a more environmentally friendly alternative to harsh legacy chemicals.
